Your hunting trophies remind you of a unique hunting experience. We guarantee you beautiful trophy mounts that you will be happy with for many years to come.

FIRST CLASS TROPHY

We create beautiful trophy mounts for proud hunters worldwide

Caribou

Muskox

Front page photo

The muskox mount, created by Mr. Roland Rytko, a taxidermist and workshop manager at First Class Trophy Taxidermy, achieved the esteemed recognition of "Best of Europe" at the 2023 European Taxidermy Championships (ETC®) in Salzburg, Austria.

Contact details:

Tel Denmark: +45 70 200 850
e-mail: office@firstclasstrophy.com

Dear Hunter

“The hunt is not over until the trophy mount is safe in your home.”

We believe that you will have (or already have had) an unforgettable hunting adventure in the Arctic. As Operation Manager in Europe's largest taxidermy company, I know how much your hunting trophies mean to you.

My colleagues and I will do our best to take very good care of your trophy and all your needs, including information and follow-ups regarding your trophy from Greenland.

First Class Trophy is probably the most experienced taxidermy company in the world when it comes to logistics for taxidermy from Greenland. Due to many years of experience we know all the small details which makes us able to ensure your trophy gets the best and safest “journey” all the way from Greenland to your home if you live in an EU country or to your in-coming broker if you live outside EU, eg. USA, Canada, Norway, Switzerland, Australia, etc.

You can choose between “Dip & Pack” work only and have the trophy shipped to your preferred taxidermist – or you can choose to let First Class Trophy finish the whole process including mounting of the trophy.

"Dip & Pack" or Mounted trophy: *No matter what option you choose, we offer you an **ALL INCLUSIVE** solution, where all the costs for logistic and taxidermy work are known in advance – with no “ugly” surprises.*

The following pages will help you familiarise yourself with the whole process of “After the shot” with detailed information and calculations regarding the costs.

We trust you will enjoy reading this and if you have any further questions, you are more than welcome to contact me.

At your service

Wynand Louw

Operation manager

First Class Trophy Taxidermy

Probably the best taxidermy team in Europe...

Our taxidermists have won the titles **'BEST IN WORLD'** and **'BEST IN EUROPE'** multiple times. As Europe's largest taxidermy company, we leverage our extensive buying power to source the finest materials on the market. This allows us to efficiently produce high-quality taxidermy mounts and provide you with the best value for money for your investment.

With more than 20 taxidermists at our workshop (with our own tannery), we have a large capacity and therefore a short delivery time.

*With World Champion taxidermist **Ken Walker** leading our taxidermy team, you can expect a beautiful trophy mount that you will enjoy for many years.*

Our mission is to create beautiful trophy mounts for proud hunters worldwide. It looks like we are succeeding, as today we are the largest taxidermy company in Europe.

FIRST CLASS TROPHY

We create beautiful trophy mounts for proud hunters worldwide

www.firstclasstrophy.com

AFTER THE SHOT

LOGISTICS & TAXIDERMY PROCESS

Step-by-step...

First Steps

Getting the trophy to First Class Trophy Taxidermy

- The hunting guide tags the trophy with the hunter's name and reference number. The hunter and the hunting guide fill out the order form manually, which is then signed by the hunter.
- The hunting guide, outfitter or booking agent emails the order form to: office@firstclasstrophy.com
- First Class Trophy creates the order in the ERP system. The hunter gets a login to First Class Trophy's Order and Production web based portal, where the hunter can "Track & Trace" the order progress, logistic and production stages.
- **The hunter pays 50% deposit of the total order.**
- The trophy and export paperwork will be delivered to Royal Arctic Line (RAL) for shipping from Greenland to Denmark. The trophy arrives in Denmark and First Class Trophy will, in partnership with RAL, take care of all import procedures, customs clearance and veterinary inspections into Denmark. The trophy will be transported to First Class Trophy's workshop for taxidermy work.

We normally receive the trophies from your outfitter 1-2 months after the hunting season ends. For summer hunts, we usually receive the trophies in October/November/December and for winter hunts in June/July (often the fjords/sea is frozen in Greenland until June). The trophies will be shipped as frozen trophies and will be kept frozen until they reach our taxidermy workshop.

Following Steps

Taxidermy work

- The taxidermy work will start. The hunter will be updated with progress by email notification and can also log-in to check order status at any time.
- 2 weeks before the taxidermy work is finished, the 50% balance must be paid (the hunter will be notified in this regard by FirstClass Trophy)

If the hunter only wants "Dip & Pack" work (boiled and cleaned skull and tanned skins) we normally finish the work within 6-8 months. If the hunter wants First Class Trophy to do the mounting, we finish the work within 7-9 months.

Final Steps

Getting the trophies back home to the hunter

- When First Class Trophy has received the balance payment, the packing and crating will take place
- The hunter must confirm the delivery address and thereafter the trophy will be shipped to the hunter's address if the hunter lives in an EU country or to a preferred incoming broker if the hunter lives outside EU (USA, CANADA, NORWAY, SWITZERLAND etc.)
- The receiver (hunter or incoming broker) will be notified regarding the delivery date

Processing time: We use 6-8 months for "Dip & Pack" work and 7-9 months for mounted trophies.

NB: Winter hunting trophies (hunted in February-March) are normally received at our workshop for processing in June/July (often the fjords/sea is frozen in Greenland until June). For summer or autumn hunting (August/September/October) trophies are received for processing in October/November/December

NB: Work commences when we have received the trophies and the deposit has been paid.

"Track & Trace" all logistic and taxidermy process on our web portal

- When you receive the order confirmation from First Class Trophy, you will also get an username and password for our on-line production portal "Track & Trace". When you log-in at the portal, you will be able to follow the individual stages with your trophy all the way from we receive the trophy from Greenland, through the entire taxidermy work and packing/crating progress until the trophy is ready to ship to you.

AFTER THE SHOT

1

Skinning and tagging of your trophy

Your outfitter will take care of your trophy in Greenland and prepare it according to your preferences. Please make sure that all parts of the trophy are tagged correct and carefully so we can identify it when we receive it.

Important: Write your name and the trophy number reference on the trophy tags with a water resistant permanent marker.

2

Shipment of your trophy from Greenland to Aarhus in Denmark

Your outfitter or hunting agency will arrange shipping of your trophy from Greenland to Aarhus in Denmark. The cost for this service must be paid by the hunter directly to your outfitter or hunting agency.

3

Receiving the trophy in Aarhus, Denmark

First Class Trophy will take care of your trophy when it arrives in Aarhus, Denmark.

First Class Trophy will take care of the following:

- Handling and customs clearance
- VAT (customs clearance)
- CVED documentation
- Veterinary control or certificate
- Terminal costs
- Frost container rental during the entire import process
- Designated sealed frost transport to First Class Trophy taxidermy workshop
- Handling and unpacking, checking and tagging of trophies
- Frost storage of the trophies for later processing

The price for this service in Aarhus, Denmark is 300 EURO per trophy if we handle more than 5 trophies at the same time. If less than 5 trophies, the price will be calculated individually.

Taxidermy work

4

Taxidermy work

When the trophy arrives at our taxidermy workshop, we will immediately take care and secure that your trophy gets the correct treatment. First Class Trophy is Europe's largest taxidermy company. We have considerable experience with trophies from Greenland and can assure you of the very best quality and service.

We offer "Dip & Pack" or Mounting of your trophies

"Dip & Pack"

If the hunter prefers another taxidermist other than First Class Trophy, he or she can choose to have the trophy prepared as "Dip & Pack" for export to their preferred taxidermist.

PLEASE NOTE - VERY IMPORTANT

Please note that we recommend our extended "Dip & Pack" service includes wet tanning of the skin (dried for export).

We tan the skin rather than only salting for a number of reasons:

- 1 We have our own tannery, which means that we tan the skin with full control over the process. This ensures that the hunter receives a skin that is quality checked before mounting. Therefore there is no risk that the hunter will receive a skin that is not suitable for mounting.
- 2 If there is any problem with the skin (hair loss or any other quality problem) we will discover the problem during the tanning process and can act to solve it and eventually source another skin for the hunter.
- 3 The hunter saves money. Our price for a tanned skin is less than most other taxidermist will charge just for salting of the skin.
- 4 The hunter saves MORE money. The fact that the skin is already tanned means it can be used directly for mounting by the hunter's taxidermist without costs other than the final trimming of the nose, ears and lips and soaking the skin in a liquid to make the skin flexible and stretchable again. So the hunter should get a discount on the mounting price from his or her local taxidermist compared with the normal mounting price where the hunter delivers the salted skin to his or her taxidermist. In the export box with the trophies, there is a document with information for your taxidermist regarding which liquid solution to use for the soaking.

Here is the approximate cost for tanning of skins for mounting in the USA:

Muskox: Life size skin: 1 000 - 1 200 USD, Cape size skin: 500 - 600 USD

Caribou / Reindeer: Life size skin: 300 - 350 USD, Cape size skin: 75 - 100 USD

Depending on your taxidermist's cost structure, the hunter should be able to get a good discount on the mounting price.

MOUNTING

As Europe's largest taxidermy company we can promise you that we will create a beautiful trophy mount for you. We create many trophy mounts from Greenland's wildlife and assure you a trophy mount in the best quality with attention down to the smallest detail. Please see our references from hunters all over the world, on our website.

You can choose to have your trophy mounted as:

- European mount (skull on wooden shield)
- Shouldermount for wall
- Shouldermount for pedestal mount
- Full mount

Please see page 15 + 16 for inspiration and examples
Please see our mounting prices on page 9

5

Packing & crating of “Dip & Pack” or mounted trophy

When we have finished our work with your trophy, we will build strong crates for transporting it to you. Our crates are built with approved material for export and meet all relevant international regulations. We will carefully pack your trophy into the crate so it arrives safely.

Shipping

We will ship your trophy to the agreed address by either road transport or airfreight. If you live in an EU country, we ship the trophy all the way to your doorstep. If you live in a country outside the EU, we ship to the preferred incoming broker in your country. Please see our shipping prices on separate sheet.

Please note. There are savings on packing, crating and shipping if we ship 2 or more trophies to one (1) address. See separate information sheet.

Insurance

Please note that your trophy is insured all the way from Greenland until you have received it at the destination address. The insurance covers trophy fee, service in Aarhus, taxidermy work, costs for packing and crating and transport costs. This insurance cost is included in the price. The insured amount is 2 000 EURO. If the hunter wants additional coverage it can be offered at 1% of the insured amount.

Your Greenland trophy mount is INSECT-PROOFED with MOUNT MEDIX

First Class Trophy Taxidermy is an Authorized Mount Medix Taxidermist

In addition to a beautiful trophy mount of world-class quality, you will get an “insect-proofed” taxidermy mount and a solution for lifetime protection & maintenance.

New regulations – new solutions

In the “old days” Arsenic and Edolan U were very effective but highly toxic methods of insect prevention in the taxidermy industry. These materials have been used for decades, but due to changes in regulations, they are not legal to use in taxidermy anymore. **But the need for prevention is still there**, and perhaps even stronger as we see a fast-growing insect problem due to global warming?

Normal insecticides and bug repellents are usually harmful to people, have a displeasing odour and can leave stains on the hair. They are not recommended for taxidermy mounts.

With our professional Mount Medix Mount treatment, you will receive an insect-proofed taxidermy mount. And if you choose a “Dip & Pack” solution we will give the skull and skin (tanned) a full anti-insect treatment. The treatment is included in the prices.

During the production of your taxidermy mounts, we use the well-proven Mount Medix technology that ensures that we deliver an insect-free taxidermy mount to you. The treatment is a combination of several processes and products following the guidelines from the world’s leading specialist in insect protection and - extermination in the taxidermy industry.

The Muskox boss and horns need professional treatment and a lot of experience...

One of the biggest challenges, especially with musk oxen, is a treatment against insect infestations, as there are large cavities under the "boss". These cavities must be completely cleaned of cartilage and keratin so that insect larvae do not "enjoy" themselves in there and suddenly appear as crawling and flying insects with a subsequent risk that they will start to eat the skin or/and eat the keratin in the hair roots with the consequence that the hairs start to fall off the skin and leaves hairless spots.

The Muskox boss has a complicated structure with myriads of hollow "pockets", where insect-larvae can live on the remaining cartilage and protein. Our treatment, including the injection of Mount Medix Horn & Hoof, will keep this free of insects / larvae

Injection of Mount Medix Saver Horn & Hoof

As with the horn cavities, removing all soft tissue from a hoof and feet can be impossible. A small application of Mount Saver Hoof and Horn (injection) can prevent future insect damage.

The mount and skin are insect-proofed through a 3-Step process.

This is the first step in the Mount Medix long-term taxidermy insect protection program. The Mount Saver Glue Additive is mixed into the glue, which adheres the skin onto the mannequin = deep inside insect protection. The adhesive will encapsulate the Mount Medix active, creating a time-released mechanism for bug prevention.

After injection the hole is permanently closed with epoxy and painted in natural colour. After airbrush painting the "surgical procedure" is invisible

Your Greenland trophy mount is **INSECT-PROOFED** with **MOUNT MEDIX**

The Mount Medix Pre Soak additive is mixed into the water that is used to rinse the skin before mounting. Ensures an “all-through-skin” protection.

All mounts and tanned skins get a treatment with “Mount Protector”. This product contains high-quality hair and hide conditioners to protect the mount, siliconized oils for easy dusting and no residue formation, plus it contains the Mount Medix active insect ingredient to keep mounts from being damaged by moths and dermestids.

Anti-fade treatment

Besides the anti-insect treatment, all mounts and dry tanned skins (flat skins) will be treated by us with Mount Medix’s “Taxidermy Fade Protector”. It will prevent the colour-fade or yellowing that occurs with all mounts as they age and are exposed to natural and artificial light. Since colour change is a relatively slow and irreversible process, most people don’t realize it’s occurring until it’s too late.

Protect your trophy mount for a life-time against insect-related damages and damages from UV-light

In addition to the treatment that your taxidermy mount undergoes in the production process, we also offer our customers a Mount Medix maintenance program where you, with an “easy-to-do” annually (or semi-annual) treatment, can maintain your taxidermy mount in perfect condition and prevent insect / bug attack throughout its lifetime. You can buy the Mount Medix products on-line for follow-up / maintenance treatment. The products are available from stock in USA and in Europe. Read more and buy Mount Medix products here:
