Portfolio Book 2024

FIRST CLASS TROPHY

We create beautiful trophy mounts for proud hunters worldwide

To be an 'Animal Stuffer' - or a 'Taxidermy Artist'. What is the big deal?

Carsten Skakkebaek
Founder and Co-Owner

Since my childhood, nature and wildlife have been my overall passion. Later on, hunting became of significant interest. I have been hunting in 28 different countries and have enjoyed watching and learning from mother nature's many creatures through my travels around the world.

Through hunting, I came into contact with the taxidermy industry, and after 25 years in business administration and communication, I decided to enter the taxidermy industry. That was back in 2008. During my first years in the taxidermy business, I realised that for decades taxidermists have mainly been considered as "animal stuffers" by people outside the taxidermy industry and not as the artists they are.

My dream was to ensure the outside world viewed the entire taxidermy industry as a universe of art and beauty, not as people "stuffing animals" or having "nice craftsmanship". I believe that the art of taxidermy should be recognised equally with other types of art such as painting, sculpting, architecture etc.

'Talent & Passion' combined with 'Business Administration'

Taxidermists have many talents. When you combine talent with a passion for wildlife, magic occurs. It's incredible what can be done by talented taxidermists around the world. Just surf the internet, and you will be pleasantly surprised.

When the taxidermist's talents and passion are combined with my background in business administration (project management, IT infrastructure, logistics, economics, communication, etc.), a synergy occurs, creating the foundation for a modern taxidermy company that meets all the customers' needs and demands from start to finish.

First Class Trophy Taxidermy combines it all

I'm proud that First Class Trophy Taxidermy combines all the skills needed for a modern taxidermy company. Our large staff of taxidermists have the talent and passion for taxidermy, as you can see in some of our work in this book. My other colleagues are professionals in project management, IT infrastructure, logistics, economics, communication etc. This combination of skills makes our company a very strong and competent taxidermy & logistic partner for hunters worldwide. The work we do at First Class Trophy Taxidermy has earned its reputation.

We are here to serve you, and we love what we do

We want the same thing our customers do: innovative, realistic, and beautiful trophy mounts. We are very privileged that hunters from more than 35 nations, since 2008, have chosen First Class Trophy to take care of their valuable hunting trophies.

Probably the best taxidermy team in Europe...

Our taxidermists have won the titles 'BEST IN WORLD' and 'BEST IN EUROPE' multiple times. As Europe's largest taxidermy company, we leverage our extensive buying power to source the finest materials on the market. This allows us to efficiently produce high-quality taxidermy mounts and provide you with the best value for money for your investment.

We promise you a beautiful trophy mount that you will enjoy for many years.

Carsten Skakkebaek

Founder and Co-Owner
First Class Trophy Taxidermy

KEN WALKER

3 TIMES WINNER OF TITLE **"BEST IN WORLD"**

Your guarantee of a beautiful trophy mount.

With World Champion taxidermist Ken Walker leading our taxidermist team, you can expect a beautiful trophy mount that you will enjoy for many years.

Ken Walker's extraordinary talent and creativity is recognised worldwide. His 40 years experience and dedication to taxidermy has led him to win the titles **'BEST OF EUROPE'** (European Champion) and **'BEST IN WORLD'** (World Champion) 3 times. He has also won numerous other awards. These results, in combination with our other taxidermists many years of experience and remarkable results at international competitions, ensure you receive a product of absolutely top class quality.

With more than 20 taxidermists at our workshop (with our own tannery), we have a large capacity and therefore a short delivery time. We buy a large amount of material, which means lower production costs. This enables us to offer attractive prices.

The opposite page shows the two roebucks made by Ken Walker presented to the public at the 'European Taxidermy Championships ETC® 2021'. The American magazine 'Breakthrough Magazine' featured the mount on the front page in January 2022. Breakthrough Magazine is 'Devoted To The Serious Wildlife Artist' and is the 'bible' of the taxidermy industry. When you get selected for a front-page feature, you have reason to be very proud and happy. Ken Walker has had the honour of 'hitting' the front page no less than four times.

First Class Trophy Taxidermy - probably the best taxidermy team in Europe...

The latest international taxidermy competition that our taxidermists attended was 'The 13th European Taxidermy Championships ETC®' in Salzburg, Austria, 13th-19th February 2023.

The general quality level was high, and among 206 taxidermy mounts entered in the competition, created by taxidermists from 34 countries, First Class Trophy's talented taxidermists made a remarkable record.

The First Class Trophy team won the most Awards, Titles and Places that any taxidermy team has ever achieved in the 25 years of ETC®s history.

Choose between...

“ONLY TAXIDERMY WORK” or “ALL INCLUSIVE SOLUTION”

For many hunting destinations (such as Namibia, South Africa, Zambia, Tanzania, Zimbabwe, Botswana, Greenland, Uganda) and most countries in Europe we offer:

Only Taxidermy Work

With this solution the hunter is responsible for organising the entire logistics process with the trophies, the import process and delivery the horns/skulls and skins to First Class Trophy in Europe for taxidermy work.

ALL INCLUSIVE Solution

This is our 360-degree service package where First Class Trophy takes care of the entire logistics process with “Dip & Pack”, export paperwork, packing & crating, airfreight, import, delivery to our workshop, taxidermy work and delivery to the hunter’s address or incoming broker. The hunter only gets 1 invoice and has only 1 contact - and it is First Class Trophy. It saves time, trouble and money.

The benefits of our ALL INCLUSIVE solution are many:

Experienced and Professional Organisation

From the very beginning and, until you receive them, the trophies will be handled by a responsible and professional organisation that you can contact at any time. We speak Danish, Swedish, English, German, Afrikaans, Chinese and Russian.

Fixed and Pre-known Costs

The ALL INCLUSIVE solution gives the hunter the benefit of knowing the exact costs in advance of the entire process with both logistics and taxidermy work. You will know the exact costs of the transport, insurance, veterinary certificates, custom duties, taxidermy work and delivery to you or your brokers address. There will be no hidden costs or unexpected additional invoices coming to you after your hunting trip. Many hunters have had their hunting trip spoiled by these unexpected expenses.

Track & Trace

The entire logistics process and taxidermy process of your trophies can be monitored step by step on our “Track & Trace” web portal 24/7. Along with the ability to log in on our web portal, the hunter gets an automatic email notification each time a work status changes in the logistics process and in our production process. You will always have full information.

Your Trophies are Insured

Your trophies will be insured from the moment our shipping partner collects them from the local ‘Dip & Pack’ partner, all the way to your address or your in-coming broker receiving them. Our insurance covers trophy fees, ‘Dip & Pack’, taxidermy work and transport.

Fast Delivery

Your trophy mounts will be completed and delivered within 8-12 months after your payment of the required deposit. The delivery time can sometimes take 1-2 months extra if we have to wait for export / import papers like CITES documents. In EU countries the delivery of the finished trophy mounts are done directly to the hunter’s doorstep. Outside EU (such as Norway, Switzerland, USA and Canada) we deliver to the hunters preferred incoming broker.

Your Trophy Mount is **INSECT-PROOFED** with **MOUNT MEDIX**

First Class Trophy Taxidermy is an
Authorized Mount Medix Taxidermist

1 Year Guarantee

Your trophy mount, produced by First Class Trophy Taxidermy from 1st January 2022, is so effectively treated against insect attack, that we give you 1 year guarantee that no damage from insect attack will happen to your trophy mount. And that's counts for all kind of trophy mounts: mammals, birds, reptiles and amphibians. If, unexpectedly, damage from insect infestation should occur within 1 year from the delivery date of the mount, the warranty will cover a repair damage or if a repair is not possible, a full refund of the amount paid for the taxidermy work.

Lifetime protection & maintenance

After the end of the warranty period, we can offer you a Mount Medix solution for lifetime protection & maintenance

New regulations – new solutions

In the "old days" Arsenic and Edolan U were very effective but highly toxic methods of insect prevention in the taxidermy industry. These materials have been used for decades, but due to changes in regulations, they are not legal to use in taxidermy anymore. But the need for prevention is still there, and perhaps even stronger as we see a fast-growing insect problem due to global warming?

Normal insecticides and bug repellents are usually harmful to people, have a displeasing odour and can leave stains on the hair. They are not recommended for taxidermy mounts.

During the production of your taxidermy mounts, we use the well-proven Mount Medix technology that ensures that we deliver an insect-free taxidermy mount to you. **The treatment is a combination of several processes and products following the guidelines from the world's leading specialist in insect protection and - extermination in the taxidermy industry.**

Horns & Antlers need professional treatment and a lot of experience.

One of the biggest challenges for many antelope horns is to perform an effective treatment against insect infestations.

Horn & Antler “bath” with Mount Medix Pre Soak

We give all horns and antlers a “bath” in a Mount Medix Pre Soak solution. In many cases, there will be some tissue in the horn cavity that will be odorous and also attract bugs, especially dermistids. A 48-hour soak will help remove the bad odour and kill any insect that might be present.

For the species with “boss” there can be large cavities under the boss. These cavities must be completely cleaned of cartilage and keratin so that insect larvae do not "enjoy" themselves in there and suddenly appear as crawling and flying insects with a subsequent risk that they will start to eat the skin or/and eat the keratin in the hair roots with the consequence that the hairs start to fall off the skin and leave hairless spots.

We also do injection/rinse to numerous of other species where the horns can come off the inner-horn, like, Sable, Kudu, Oryx, Ibex etc. For some species, like Buffalo, we seal all gaps surrounding the horn and skull with a material like epoxy or body filler. After this material hardens, we drill very small holes into the horn cavity and inject the Mount Saver Hoof and Horn into the cavity. The Hoof and Horn are formulated to penetrate the tissue that may be present and prevent insect damage.

After injection, the hole is permanently closed with epoxy and painted in natural colour. After airbrush painting the “surgical procedure” is invisible

Especially the Muskox boss has a complicated structure with myriads of hollow “pockets”, where insect-larvae can live on the remaining cartilage and protein. Our treatment, including the injection of Mount Medix Horn & Hoof, will keep this free of insects / larvae.

Injection of Mount Medix Saver Horn & Hoof with extremely potent natural insecticide

As with the horn cavities, removing all soft tissue from a hoof and feet can be impossible. A small application of Mount Saver Hoof and Horn (injection) can prevent future insect damage.

The mount and skin are insect-proofed through a 3-Step process.

This is the first step in the Mount Medix long-term taxidermy insect protection program. The Mount Saver Glue Additive is mixed into the glue, which adheres the skin onto the mannequin - deep inside insect protection. The adhesive will encapsulate the Mount Medix active, creating a time-released mechanism for bug prevention.

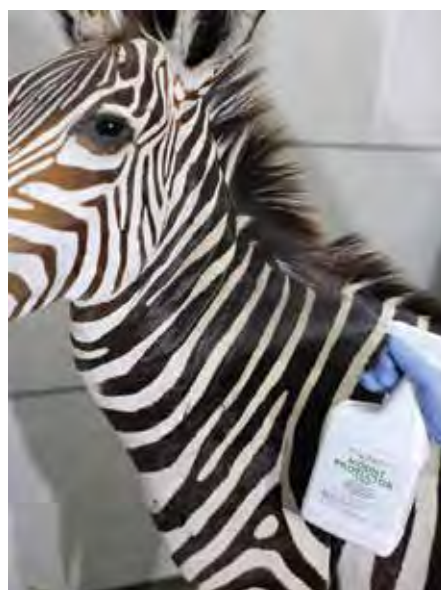

The Mount Medix Pre Soak additive is mixed into the water that is used to rinse the skin before mounting. Ensures an “all-through-skin” protection.

For bird taxidermy, we use the Mount Saver Powder.

Formulated to replace BORAX (partly or full). We coat the bird skin with this powder before mounting and this will provide maximum insect proofing in bird mounts.

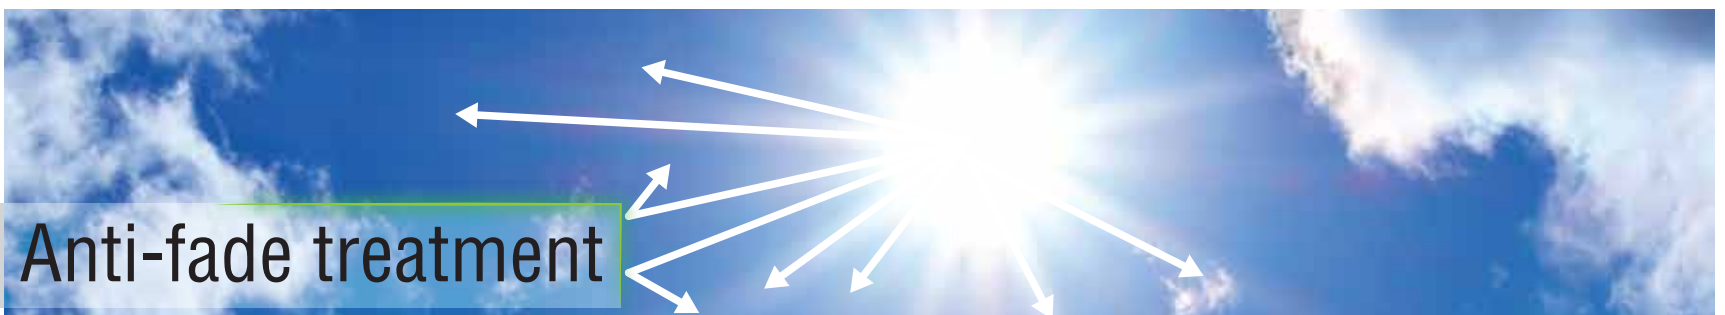

All mounts and tanned skins get a treatment with “Mount Protector”. This product contains high-quality hair and hide conditioners to protect the mount, siliconized oils for easy dusting and no residue formation, plus it contains the Mount Medix active insect ingredient to keep mounts from being damaged by moths and dermistids.

Insect Protection for the base / habitat

To protect habitats/bases made of natural habitat materials like moss or grasses we use the Mount Saver Powder. The Powder is sprinkled onto the habitat materials, and we tap lightly to remove the excess powder.

Anti-fade treatment

Besides the anti-insect treatment, all mounts and dry tanned skins (flat skins) can be treated by us with Mount Medix's "Taxidermy Fade Protector". It will prevent the colour-fade or yellowing that occurs with all mounts as they age and are exposed to natural and artificial light. Since colour change is a relatively slow and irreversible process, most people don't realize it's occurring until it's too late.

Maintenance program with life-time protection

In addition to the treatment that your taxidermy mount undergoes in the production process, we also offer our customers a Mount Medix maintenance program where you, with an "easy-to-do" annually (or semi-annual) treatment, can maintain your taxidermy mount in perfect condition and prevent insect / bug attack throughout its lifetime. You can buy the Mount Medix products on-line for follow-up / maintenance treatment. The products are available from stock in USA and in Europe. Read more and buy Mount Medix products here:

USA: <http://mountmedix.com>

Europe: <http://mountmedix.eu>

Our clients receive a certificate “Insect-proofed Taxidermy Mount”

When you receive the finished taxidermy mount from First Class Trophy Taxidermy, you will receive an official signed certificate as your confirmation that the mount(s) have been treated with the full 3-Step Mount Medix insect-protection.

Read more at www.mountmedix.eu

Furthermore, your taxidermy mount can be effectively protected against insect-related damage throughout its lifetime.

In addition to the treatment that your taxidermy mount undergoes in the production process, we also offer our customers a Mount Medix maintenance program where you can maintain your taxidermy mount in perfect condition with and "easy-to-do" annual (or semi-annual) treatment and prevent insect or bug attack throughout its lifetime.

Mount Medix LLC is a company founded in the USA to provide high-quality natural products to the taxidermy industry.

Created by scientists and professional taxidermists – laboratory tested with documented effect

The Mount Medix product line was created by leading natural product development scientists in conjunction with professional taxidermists to accommodate the needs of the taxidermy industry. The philosophy behind the Mount Medix concept is as simple as it is ingenious: Protecting the taxidermy mount against insect attacks through cleaning solutions & eliminating the mount as a food source for insects and their larvae. These products have been thoroughly tested in the laboratory and have been professionally and privately used to protect and treat insect infestation in taxidermy mounts and trophy rooms in the USA for more than 10 years.

Made from high-quality natural products - no pesticide licence needed

The entire Mount Medix product program can be purchased and applied without a pesticide licence. The products are easy to use and leave behind a pleasant odour.

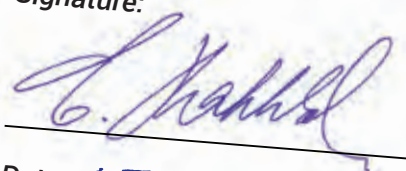

It is hereby confirmed that the taxidermy mount(s):
TAG No: 152.480

completed for client, Name: Hannibal Eberhardt

is anti-insect treated according to the specification from Mount Medix.
